

Final Project

Style Muse

Xiuhan (Lydia) Chen

Intro to User
Experience

Target User

Our target users are fashion-interested young to middle-aged women (ages ~20–40) who frequently need outfit ideas for a wide range of scenarios—daily classes or work, business casual events, dates, travel, weekends, or seasonal occasions. They care about presenting themselves well and enjoy looking stylish, but often feel overwhelmed by the effort required to put together cohesive outfits.

These women typically draw inspiration from social platforms (Pinterest, Xiaohongshu, Instagram, TikTok) and rely on mirror selfies, saved posts, or mental notes to guide their choices. However, their existing process is fragmented: their closets, inspiration boards, shopping apps, and outfit ideas all live in separate places, making decision-making tiring and time-consuming.

They want to feel confident, put-together, and expressive through fashion—but struggle with decision fatigue, uncertainty about what's appropriate for certain occasions, and difficulty visualizing outfit combinations with the clothes they already own. A solution that centralizes inspiration, outfits, wardrobe tracking, and recommendations would meaningfully improve their daily dressing experience.

User Research

To gather firsthand insights, I conducted a one-on-one semi-structured interview with a college student who fits my target user profile: a young woman who frequently needs outfit ideas for school, social events, and business-related occasions. The session lasted around 10 minutes and focused on her current outfit-selection habits, tools she uses, pain points, and reactions to early feature concepts. Below is the transcript.

Persona - Avery Lin

Who female, 22

What Senior at Columbia

Motivations

wants to look polished and confident across different settings (class, interviews, presentations, dates, events), trying to build a more “adult” wardrobe as she transitions into professional life

Fears

looking unprofessional in business settings, showing up underdressed or overdressed, making the “wrong” style choice

“I love curating my style, but sometimes I just want a little inspiration that feels like *me*, not a random trend.”

Journey Map

Pain Point

Users lack a clear bridge between inspiration, brand discovery, and their existing wardrobe—resulting in wasted time, uncertainty, and redundant purchases when trying to dress for specific situations like interviews.

User Flow

Four main function:

1. AI outfit generator
2. Search function for both items and outfits
3. Digitized wardrobe
4. Share your outfit
